

Bald Head Association

Island Report

Communication, Advocacy and Protection of BHI Property Values

President's Letter: *Help*

~Kit Adcock

During the last two months the Bald Head Association has been reacting to several significant environmental challenges on behalf of our property owners and the island as a whole. Each day we learn more and more about wind turbine farms and oil and gas exploration off North Carolina's coast. Be aware: these are NOT issues distant from our island either geographically or with respect to time. These energy issues and their related activities deserve your close attention.

Part of BHA's advocacy role is to educate our property owners on issues of concern through a variety of communications media. By the time you read this, we hope to be analyzing survey results from our homeowners. Knowing how you feel about each of the energy efforts and their related activities will drive how the Association proceeds.

Meanwhile, you have been represented at the public hearings held on wind, oil and gas and the seismic surveys required for oil and gas drilling. Two meetings were held in Wilmington in mid-February by the Bureau of Ocean Energy Management (BOEM), the first about two wind farms of up to 250 turbines each proposed off Bald Head Island, and the second about oil and gas exploration 50 miles off North Carolina's coast. The deadline for public comments on each proposal was the end of February; not much time to even begin to understand the issues or determine how these activities might affect Bald Head Island.

The Association prepared well-conceived and well-organized rational arguments in opposition to these efforts on behalf of BHA and Stage Two property owners. Copies are posted on the Association website: baldheadassociation.com. Comments on seismic surveying due at the end of April are currently being prepared. (Not all seismic surveying is created equally as you can learn by visiting the Association website and reading the excellent articles by Kip Tabb and Trista Tarlton that originally appeared in *Coastal Review Online*.)

In order to help property owners better understand what is being proposed with oil and gas, the Association and the BHI Conservancy sponsored a presentation by Roger

Shew of UNCW on April 6th. Mr. Shew has vast direct experience in the oil and gas industry and now teaches at UNCW. Most of his incredibly informative presentation is available on the Association website.

Each island entity has a particular role it can play in this collective effort. We rely on the Bald Head Island Conservancy to exploit its contacts in the environmental and conservation spheres to collect and share data. We have asked the Village to communicate island concerns and collaborate with other local and regional governmental agencies. BHA hopes to energize the community to share their connections in business, government and the non-profit sector while coordinating island-wide efforts.

More than 40 years ago, well before social media was conceived, the very first environmental battle in NC occurred over development of this very island. We must work together

as a community not only to honor that effort, but also to preserve a community that has effectively worked in harmony with nature ever since.

ARC Corner
Karen Mosteller,
Architectural Review
Coordinator

It's a TRASHY subject...

April was definitely full of showers so hopefully May will be filled with flowers. Before the visitor high season begins, we wanted to share the design guidelines that relate to trash receptacles:

Requirements:

- Trash receptacles must be under or near the house.
- Unobstructed access convenient to the driveway must be provided.
- Receptacles must be animal proof.
- Receptacles must be sized to hold at least two 30 gallon trash containers.
- Garbage tags (YES/NO) are provided by the Village and should be located on or near the trash receptacles and must be visible from the street or alley. Exceptions requiring an alternate tag placement location will be determined by Village Public Works. No advertising is permitted on garbage tags.

Last year, Waste Industries, the company that handles BHI pick up, began moving garbage tags without notification. Once Waste Industries was informed that this was not appropriate, they stopped; however, some homeowners followed suit and started moving their tags. In accordance with the Design Guidelines, the tags must not be located on the address bollard. It's important to note that a garbage tag on an address bollard may impede Public Safety's ability to respond during emergency situations.

We need your help! If your garbage tag was moved to the address bollard,

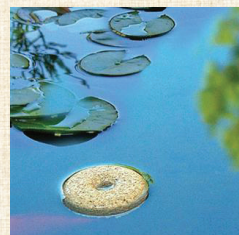

Appropriate

Garbage tags should not be hung on address bollards, but should be relocated on trash enclosures.

please return it to the appropriate location on or near the trash enclosure. If you are concerned that this will not work for your particular situation, please call Village Public Works Director Ben Liddle at 910-457-5422.

If you have questions about the ARC process or the Design Guidelines, give us a call at 910-457-4676 ext 22 or email karen@baldheadassociation.com. The updated BHA Design Guidelines can be found online at <http://www.baldheadassociation.com/architectural-review-and-design-guidelines>.

Standing Water and Mosquitoes

If you have any amount of standing water in your yard or boat, you are contributing to the population of mosquitoes on the island. The best control is to eliminate the water. If there are areas that fill with rain, such as tarps, boats, pots or low spots in your yard, you can use the Mosquito Dunk in that area. If you leave the Mosquito Dunk in an area prone to collect water, it will help eliminate problem mosquitoes quickly and safely.

The Mosquito Dunks are EPA registered in 50 states and can be used in virtually any standing water site where mosquito larvae grow. Mosquito Dunks are a biological sustained-release larvicide made of highly selective microbial insecticide that conveniently floats right on the water surface and is effective against mosquitoes in a variety of habitats.

As the dunks float, BTI (or *bacillus thuringiensis israelensis*, a natural mosquito-killing biocontrol agent) is slowly released at the water's surface and gradually settles in the water where it is consumed by mosquito larvae. BTI kills mosquito larvae before they are able to grow into mature, biting adults, eventually controlling the mosquito population. Each dunk treats up to 100 sq. ft. of surface water for 30 days. Dunks can be broken up to treat smaller areas.

Mosquito Dunks are available at Island Hardware on Maritime Way. The store is open 7:30 am – 4pm Monday through Saturday.

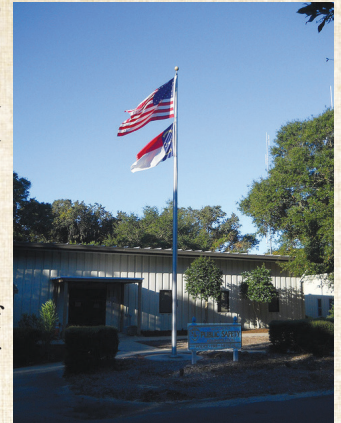

Dosher-Bald Head Island Clinic Opens Mid-May

Bald Head Island has a long history of professional emergency care provided by state-certified emergency medical providers. The Village of BHI has partnered with Doshier Medical Hospital to take that care to the next level with the addition of on-site urgent care with advanced level practitioners.

Between mid-May and the end of September, medical staff, either a physician assistant or a nurse practitioner, will be available seven days a week during daytime hours to see patients, diagnosing situations and prescribing medication when necessary. The new agreement states that Doshier Medical Center will provide the medical staff and billing support while the Village agreed to house the clinic (within the Admin Building at Department of Public Safety on Edward Teach Extension) and provide the necessary supplies, additional medical personnel and administrative support. Medicare, Medicaid, cash/credit and private insurance will all be accepted as payment for services.

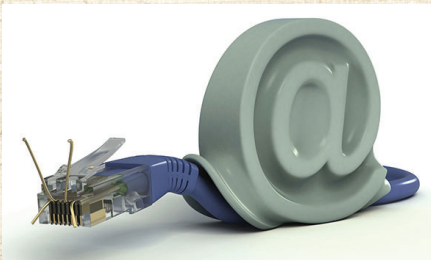

Joe Agovino, a member of the hospital’s Board of Trustees, expressed his excitement about the new clinic at the April Village Council calling it a ‘win/win for Bald Head Island and for the hospital.’

The clinic will be available to all property owners, visitors and employees of the Island. The most evident beneficiary of the clinic, however, may be vacationers. Village Councilman Dr. Gene Douglas said, “What we’re trying to do is to prevent the situation where because of an earache or a laceration or something relatively simple like that someone has to lose a whole day of their vacation time traveling to and from the mainland.”

The partners have agreed to evaluate the success of the clinic after the summer season concludes with an eye toward transitioning into a more permanent arrangement.

Watch the Village Voice and BHA’s weekly email for specific information about dates and times of operation. Contact Public Safety Director Caroline Mitchell at 910-457-9700 with questions or for more information.

Keeping Up with Broadband

Several property owners have contacted Bald Head Association frustrated that they were unable to reinstate their land-based Internet service after suspending it to cut costs during the off-season.

The Village of Bald Head Island is working toward improving broadband services on the Island but is unfortunately still several years away from a meaningful resolution. Though it may mean spending a few more dollars, property owners may want to consider keeping their Internet service active even during the winter months when they won’t be here as frequently.

Offshore Energy Development Forum Recap

On Monday, April 6th, Bald Head Association and the BHI Conservancy hosted an offshore energy development public forum at the Association Center. A full house heard from Roger Shew, geologist and lecturer at UNC-Wilmington.

Attendees learned about the context of the federal government’s quest to convert North Carolina to a source of wind, oil and gas energy and the impact those energy systems will have on Bald Head Island. Because of its complexity, this issue will be a multi-year effort and there will be multiple opportunities for public engagement.

BHA and the Conservancy continue to gather information on this important topic to help property owners understand the significance and to share the information with friends and family members. Be sure to keep up-to-date by visiting a special offshore energy development page on BHA’s web site at baldheadassociation.com/news-2 frequently.

Stay tuned for additional information on this critical topic. Contact Carrie Moffett at 910-457-4676 x21 with questions.

Saturday Morning Program

A Mother’s Heroism -

The onset of the Holocaust as seen by BHI resident Alfred Schnog

Saturday, May 9th; 9:30-11am

Delphina’s Main Dining Room

NR&B Chair Janice Alexander points to the mound of trash gathered at the April Litter Sweep.

The Island Litter Sweep Recap
~ Dianne Robinson

The Island Litter Sweep on April 4 was the most successful we have ever had. Even though there were lots of activities taking place on the island that morning, our wonderful residents and visitors came out and picked up a pickup truck full of trash.

The BHI Croquet Club came out to help and wore their whites. I have extra Oxyclean if anyone needs it. We had coffee, coffee cake, donuts, candy and a really good time.

- Prizes for Oldest: Charlie Himes of Bald Head Island
- Youngest: Evelyn Mizell of Greenville, SC
- Most Trash Picked Up: The Mohler Family
- Most Unusual: Sophie Malone of Cary, NC. They found a picture of Prince William and Princess Kate of England.

A special thanks to the Association office for the poster and publicity. Thank you to the Dept of Public Safety for use of their building and the Dept of Public Works for the truck and disposal of the trash.

This event is sponsored by the Nature, Recreation & Beautification Committee of the Association.

Cape Fear Lifesaving Station, 1882-1914. (Photo of a post card courtesy of Ida Kellam.)

boom, the only place they could get clear of the sea. Keeper Watts took them off the jib boom in less than 10 minutes and left immediately for the station. He landed abreast of the station at 7:30 pm. They were cared for until the 16th when Keeper Watts took them to Southport. The master of the Charles C. Dame sent the following letter of appreciation:

“Allow me to extend the thanks of myself and crew to you and the heroic men who manned the lifeboat from your station... Without your assistance it is more than probable that myself and crew would have been lost in the terrible seas that swept our decks. Your heroic fight of twelve hours to reach the vessel was a superhuman effort that deserves a record in the annals of the Life Saving Service, which I, as a mariner, always regard as a sailor’s hope when shipwreck stares him in the face in storm-ridden seasons along our coast. Your rescue of every man, and the safe landing of your own and my crews, was a piece of work that it delights me to pay tribute to...”

Lifesaving Stations

In 1882 the first lifesaving station built on Bald Head Island was constructed on East Beach near the Cape Fear. The men of the Cape Fear Lifesaving Station kept watch for ships in distress both night and day from the station observation room and walked the beaches in all weather. Dunbar Davis was appointed the first head keeper. In 1892, he moved over to head the lifesaving station on Oak Island and his Number One Surfman, John Watts, succeeded him as keeper on Bald Head. Their crews worked hard and were loyal. Four of the men who served under Davis and Watts were there for 17 years and another three served for over ten years each. Several of the men built their own homes close to the station and brought their wives and children over to the island.

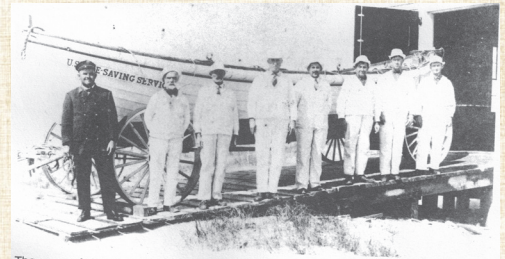

Dunbar Davis

The keeper was the helmsman in the surf boat with a stern steering oar and six surfman would sit two abreast to pull on the oars. Since the keeper was the only man facing forward the crews had to trust him to find a route through the waves and sandbars. Much of their time was spent in the routine of caring for their equipment and running training drills. The rescues, however, were anything but routine.

On October 14, 1893, the three masted schooner Charles C. Dame went ashore on Frying Pan Shoals. Keeper Watts launched the surf boat at 7:00 am. On account of the rough sea and strong wind he did not reach the vessel until 3:00 pm. The schooner had sunk on the shoal, decks under and every sea was washing over her. The crew was huddled together on the jib

The Cape Fear Lifesaving Station was closed in 1916 and the structure was eventually lost to erosion.

Sunday 11 am - 5 pm

Memorial Day Remembrance Event

Monday, May 25, 2015 - 11:30 am

The Bald Head community is welcome to attend our annual Memorial Day Service to honor fallen military service members. Please bring a lawn chair and proper outdoor attire including sunscreen.

Independence Day Cart Parade

Friday, July 3, 2015 - 10 am

Old Baldy is excited to continue the tradition of this classic Bald Head Island event. More details, including registration forms are available at oldbaldy.org.

Pirates Are Coming!

July 31 - August 2, 2015

Update from the Village - On the Village projects...

~Chris McCall, Assistant Village Manager and Shoreline Protection Manager

Terminal Groin Project Update

A pre-construction meeting was held with representatives of the Village, Orion Marine Construction (Contractor), and Federal/State regulatory agencies to discuss specifics relating to the construction of the terminal groin structure on April 2nd. The Corps and Division of Coastal Management permits require a number of conditions for the protection of coastal resources including the oceanfront primary frontal dune system and threatened and/or endangered species like the sea turtle. An example is that with the assistance of the BHI Conservancy, their staff will walk the project area each morning prior to the contractor starting work for that day to ensure there are no turtle nests that would need to be relocated within that area. Should there be, the Conservancy staff would relocate them prior to giving the contractor the go ahead to proceed with work for that day.

renters, and other interested folks who may be walking the beach in the vicinity of the project construction area. Public Safety Staff attended the preconstruction meeting to discuss expectations in terms of making sure the construction area is fenced off for safety purposes. **During the duration of the project as it is constructed, the area will be off limits to the general public, and the Village asks that everyone keep out of this area for obvious safety reasons.**

In general, it is anticipated that this project will take about 6 months to complete (MAY - OCT). If you have any questions about the project, feel free to call or e-mail Chris McCall, Shoreline Protection Manager, at 910-457-9700 ext. 1003 or cmccall@villagebhi.org. Please also visit the Village's website at the following link to view the project site map: http://villagebhi.org/government/development_services/pdf/Terminal%20Groin%20Project%20Area%20Map.jpg

Also discussed were tentative dates for mobilization of equipment, the first being the mobilization of materials and equipment to construct the temporary trestle along west beach. The temporary trestle will be used throughout the duration of the project to offload the barge carrying equipment

and supplies including the large rock material used to build the structure. While there is currently other work on-going for this project such as mattress filling and rock being quarried, the actual visual indication on the island that this project has commenced will likely happen sometime after the beginning of May with the installation of the temporary trestle system.

Another item of importance that was discussed was that of safety for our residents, tourists, seasonal

Jetty Wall Extension Project Update
Crews with Orion Marine Construction (Contractor) continue to work on extending both the southern &

northern jetty walls at the entrance channel to the BHI Marina. The project got underway a few weeks ago with the start of excavating out the existing rock that had been piled there over the years. This was to clear the way for the installation of marine mattresses filled with stone to act as the structural base or foundation for the new rock to be placed on. The mattresses are to minimize subsidence and maintain the rock jetty configuration in place over the long-term. Next steps in the coming weeks will be to complete the mattress installation for both jetties and then begin the installation of the rock. The Contractor hopefully will be completed with this project by mid-May.

Sea Turtle Season Starts May 1!
 ~ Emily Hardin, Sea Turtle Protection
 Program Coordinator

May 1st marks the beginning of sea turtle season in North Carolina and the BHI Conservancy is working hard to prepare for the arrival of our nesting mothers.

The BHI Conservancy attended the NC Sea Turtle Permit-Holder's Meeting in March. Representatives from all sea turtle programs in the state met for guest lectures, proper procedures and discussion. One of the guest lecturers was Alyssa Randall, a previous BHI Conservancy intern. She is working on her Master's at UNCW, using GIS technology to map beach characteristics to determine which beaches are the most ideal for sea turtle nesting throughout North Carolina. BHI conservancy met with Fort Fisher State

Recreation Area rangers to discuss sea turtle nest monitoring last week. The Conservancy's sea turtle protection program patrols the beaches of Bald Head Island as well as the State Natural Area (north of Access 42) up to the State Recreation Area Line, an extra 4-mile stretch of beach. While we tag and identify nests,

the rangers at Fort Fisher monitor these nests once they are laid. This partnership allows us to actively monitor a greater number of turtles.

Morning patrols begin in early May and full night patrols begin in late May with the arrival of our Interns. To participate in our Turtle Programs: Ride Along, Turtle Walks (members only) and the Sea Turtle Protection Program - please visit our website or call us at 910-338-0911. Send an email to emily@bhic.org.

Here's a refresher on what you can do to help protect BHI's sea turtles:

Turn out lights visible from the beach during sea turtle nesting season (May - October). Sea turtle hatchlings use light and reflections from the moon to find their way to the water at night. Artificial lighting confuses the hatchlings and causes them to head inland instead of out to sea. Artificial lights also discourage adult females from nesting on the beach. Short of turning off your lights, you can also shield, redirect and lower the intensity of lights on your property.

Remove beach equipment (chairs, tents, etc.) at night and fill in large holes. Beach gear left on the beach creates an obstacle for nesting sea turtles. Such an obstacle may cause mothers to false crawl rather than laying a nest. Turtles could also become entrapped in large holes dug in the sand.

Cover your flashlights. When walking on the beach after dark, please cover flashlights with red film. This film is available at Turtle Central.

Reduce the amount of garbage you produce and clean up trash you see on the beach. Sea turtles become tangled in plastic and trash both on shore and in the water. Discarded items such as balloons, plastic bags and fishing lines may be confused for food and eaten by sea turtles, causing injury or death.

Keep your dog on a leash. Dogs can interrupt the nesting process of sea turtles or harm any species that calls the shore home.

Be aware of sea turtle nesting areas and avoid nesting and hatching turtles. Sea turtles are cute and therefore tempting to touch and observe, but flashlights and people disturb mother turtles when they are trying to nest on the beach. As federally protected species, penalties including fines up to \$100,000 and/or imprisonment may be levied for touching, harassing, interfering with or in any way disturbing sea turtles! Please call the Conservancy if you find adult or hatchling sea turtles on the beach at 910-457-0089 and press "5."

Word of the Month: Seismic

President Obama opened the waters off the mid-Atlantic for potential oil and gas drilling, limiting the area to 50 miles off shore. This distance is important because when the northern and southern borders of NC are projected over the Atlantic, these boundaries encompass most of the area where oil and gas exploration may be permitted.

The federal Bureau of Ocean Energy Management (BOEM) is tasked with doing all research, including environmental factors, and will issue leases between 2017-2022 for offshore drilling. Meanwhile, another set of permits is required to perform related geological and geophysical surveys (G&G). This involves seismic surveying to map the geology up to 10,000 feet below the ocean floor. Applications for these permits have already been received by BOEM and are being reviewed. Surveying itself could begin this year.

The scope of the G&G surveys can occur as close as three miles off North Carolina's shores, at the state-federal boundary, and outward for hundreds of miles. Such widespread studies help unveil the broad geological formations that indicate where oil and gas reserves might lie. Preliminary surveys are typically 2-D and follow a grid pattern. Once any energy reserves are located, additional 3-D surveys are performed to obtain even greater detail for precision in placing drilling rigs to optimize extraction.

Seismic surveys involve blasting pressurized air through water and the ocean floor from large arrays that dangle behind a ship. The blasts occur EVERY 10-15 SECONDS continuously as ships follow a grid pattern. The reverberations are picked up by hydrophones dragged even further behind each ship. The sound from two-D surveys is 200-250 decibels (an airplane at takeoff is 180 decibels). The 3-D arrays, which are in a much tighter grid with blasts in a wider swath, reach 300 decibels.

Additional seismic testing will be needed off of Bald Head to identify locations to pile-drive the bases for prospective wind turbines.

The impacts of such widespread seismic activity on Northern Right Whales, sea turtles and slow-moving ocean-floor inhabitants unable to move out of the blast zones are unknown. Long-term impacts on any aquatic life are unknown.

This is the tip of the iceberg on the "seismic" potential impacts to our community.

Island Hardware & Maintenance, Llc has new owners!

The new owners of Island Hardware are Joselyn Corzine and Pete Fullam. They have worked on Bald Head Island for 13 and 11 years, respectively. Joselyn is currently the Executive Assistant for the Chief Executive Officer and Chief Financial Officer of Bald Head Island Limited and Pete was the Director of Facility Maintenance for the same company. They came to Bald Head Island, amazed by its beauty, and are committed to helping the Island grow and prosper. They hope to continue Debbie and Vic's legacy with the purchase of Island Hardware at 16 Maritime Way.

It is their intention to continue with everything that is in place, "business as usual," and enhance the hardware store to meet some of the needs islanders have requested. During the first year of operation, the store will be managed with all of the same products and services. They will be adding some new additional products as they move forward. The addition of lumber is one of their first goals. They are also excited to announce that the Facility Maintenance department, before operated under Bald Head Island Limited, has joined the hardware store! The new company is Island Hardware & Maintenance, LLC. Their hours are 7:30 am to 4 pm.

They appreciate the tremendous support islanders have given them in this venture. They also want to encourage ideas and comments residents and visitors may have. Please stop in to visit Pete and Jos at Island Hardware & Maintenance! For questions call 910-457-0910.

BHI Artisans Show and Sale

Saturday, June 6th
10am-5pm
BHA's Association Center

The BHI Artisans will hold their June show and sale on Saturday, June 6th from 10am-5pm at BHA's Association Center. Jewelry, fabric arts, gifts for children, photographs, home decor and American Girl doll clothes are some of the items for sale. The event is free and open to the public.

BHI Wounded Warrior Family Weekend

Friday, May 1st

PLEASE NOTE: All activities will take place at the BHI Club beginning at 4pm

The Wounded Warrior Family Weekend will run Thursday, April 30 through Monday, May 4. It's the island's unique way of saying thanks to our troops and their families. The annual community potluck dinner and skydive featuring Dana Bowman will be hosted at the Club this year on Friday, May 1. Bring your favorite covered dish or a donation and join in the fun!

Entertainment for all ages and live beach music by the Swashtones begins at 4:00 pm. The skydive will take place at 5:00 pm followed by dinner and the recognition ceremony.

After the ceremony get ready to dance under the stars and enjoy more live music and entertainment. All donations are appreciated- checks should be made payable to the Halo for Freedom Warrior Foundation, and dropped off at the BHA offices. Please write "BHI" in the memo field.

Annual Smith Island Art League Memorial Day Weekend Show
Saturday May 25th & Sunday May 26th
10:00 am to 5:00 pm

BHI Association Center

Please join the artists of the Smith Island Art League for their annual Memorial Day weekend show at the Association Center (next to the chapel). Works will be on display from 10 am to 5 pm. The event is free and open to the public.

From the left, Marilyn Ridgeway, Janice Alexander, Dianne Robinson, Jenny Dees and Gianca Helgesen

The BHI Garden Club

The Garden Club is having a very successful year. The last meeting took place at Jenny Dees' beautiful house and garden. The group learned how to make fairy gardens that are guaranteed to enchant all. For more info on the BHI Garden Club, contact Dianne at dederob@bellsouth.net.
